

Game Development Document

Game Name: <BREAKOUT GAME>

Version: tutorials 1-6 completed, working game

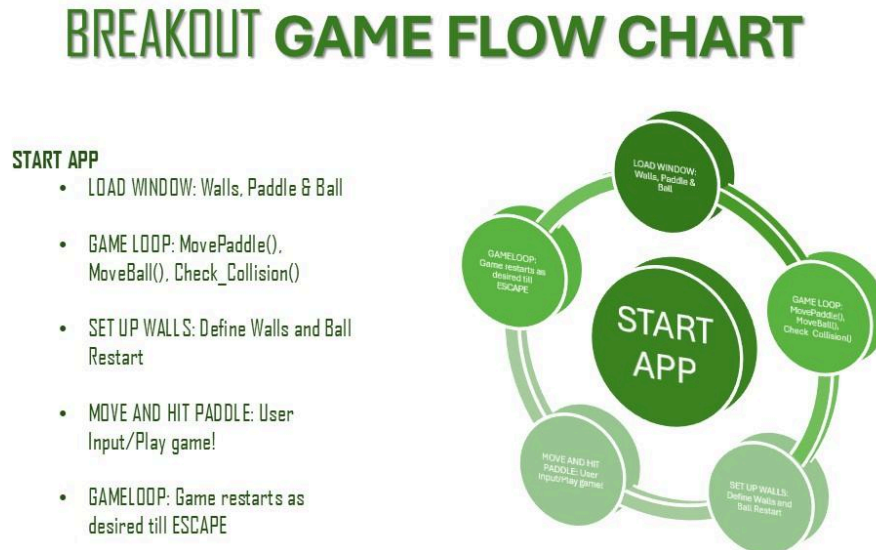

1. Story & Gameplay

Story (Brief)

“The paddle turns player input into movement. The ball carries speed and direction. Walls, bricks, and the paddle respond through collision logic. Score, lives, and reset states tell the player what happened.”

-The BUILD description from the FINAL PROJECT EXTENSION LINK

Example Image / Mind Map:

Story (Detailed)

- There's a ball, a paddle all mapped out and limited the walls we constructed around (the window frame)
- We need to initialize MovePaddle, MoveBall() and Check_collision() to set up our parameters and game rule

Example Image:

Gameplay (Brief)

Before our GAMELOOP can start, we must define

```
DrawPaddle()  
DrawBall()  
SETWALLS()  
GameLoop.Start()
```

By setting up these rules and limitations on what each of these items can be, we can then create the rules that make each of them move and create the collision element that makes the game fun and sets up the stage to potentially add the brick breaking element

Clipboard		Font		Alignment				
				Private BALL_BUFFER As Double				
A	B	C	D	E	F	G	H	I
m GameLoop As New DispatcherTimer							GameLoop	
Private hitResultsList As New List(Of Object)							SetWalls	
							DrawBrick	
Private BRICK_W As Integer							DrawBall	
Private BRICK_H As Integer							DrawPad	
Const BRICK_COLS								
Const BRICK_ROWS							CHECK_COLLISION	
Private BRICK_GAP As Integer								
Private RemoveBlocksWithMouse As Boolean								
Dim PADDLE_BUFFER As Integer								
Dim PADDLE As New Rectangle								
Const PADDLE_DISTANCE_FROM_BOTTOM As Double								
Dim CENTER_OF_PADDLE As Double								
Private PADDLE_SPEED As Double								
Dim PADDLE_TRANSLATE As New TranslateTransform								
Private MOVE_LEFT As Boolean								
Private MOVE_RIGHT As Boolean								
Private BALL As New Ellipse()								
Private WALL_RIGHT As Double								
Private WALL_LEFT As Double								
Private WALL_TOP As Double								
Private WALL_BOTTOM As Double								
Private BALL_BUFFER As Double								
Private BALL_TRANSLATE As New TranslateTransform(0, 0)								
Private BALL_SPEED_Y As Double = 5								
Private BALL_SPEED_X As Double = 5								

Gameplay (Detailed)

- Break down mechanics: movement, combat, puzzles, exploration, or crafting.
- Combine story and mechanics: how narrative drives gameplay and vice versa.
- Include diagrams or flowcharts for player decision-making, level flow, or UI.

Example Diagram:

<Insert a flowchart showing level progression or player actions>

2. Assets Needed

Visual Assets

2D / 3D Textures

- Environment Textures
- Game Element Textures

Characters

- Ball
- Paddle

Environmental Art

- Simple colors, primary colors
- Walls created by window grid

3. Code / Scripting

Player Scripts

- Player moves the paddle to hit the ball
-

4. Animation

Environment Animations

- Ball falls from top and gets restarted when falls from bottom
-
